Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: the prior art does not teach a vehicle rotary electric machine having a rectifier protection arrangement including a positive conductor member that has a higher normal electrode potential than hydrogen, a ground potential conductor member and an insulation member disposed between the positive conductor member and the ground potential conductor member, for insulating the positive conductor member. The rectifier protection arrangement including a sacrificing metal member that has a lower normal electrode potential than the positive potential conductor member is disposed in a space between the positive conductor member and the insulation member to cover a surface of the positive potential conductor member disposed in the space from the insulation member and form an oxidized layer of the sacrificing metal member when conductive liquid exists in said space, and the sacrificing metal member has a higher electric resistance than the positive potential conductor member if oxidized.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl I.E. Tamai whose telephone number is (703) 305-7066.
